

Musicextras test suite for prokyon3

This is a minimal test suite for musicextras.

Benefits are:

- 1) Any user reporting problem importing image/lyrics into prokyon3 can run the suite.
- 2) Development team will use it to monitor potential layout changes.

It uses a special comment field tag: "<Test_musicextras>" followed by parameters to musicextras. For maximum flexibility, arguments between parameters are separated by the first character after <Test_musicextras>. Typically this is '-' unless there are '-' char embedded into track's name.

There are 7 tests files together with this distribution. These are valid mp3 file with with 2 second blank track and special comment as indicated above. These will go to /usr/local/share/prokyon3/testmusicextras for a standard install.

Note 1: From time to time, some tests may fail because of timeout issues from the web server, try to run them again one or two times.

Note 2: Due to implementation restriction, there is only a single artist image displayed for the whole test suite. Although discarded, other artist images must be successfully retrieved from the web.
